

Participation in "Biodiversity 30 by 30 Alliance"

April 22, 2022

Taisei Corporation

Taisei Corporation (President: Yoshiro Aikawa) is participating in the "OECD Biodiversity 30 by 30 Alliance"*¹ established by Japan's Ministry of the Environment.

The goal of the OECD Biodiversity 30 by 30 Alliance is to achieve international target of preservation of at least 30% of domestic land and water regions by 2030 in order to halt and reverse the loss of biodiversity.

The Taisei Green Target 2050*² environmental targets require that the corporate activities of the Taisei Group consider biodiversity and be designed to achieve a society in which people can live in harmony with nature.

Taisei's decision to participate in the Alliance was made based on a judgment that its activities to achieve a nature co-existing society*³ were in line with the goals of the Alliance, and that the development and use of the nature co-existing technologies and environmental preservation technologies of the Taisei Group could assist efforts to expand and manage biodiversity protection lands.

The Taisei Group will work to resolve issues in order to minimize impact on natural capital, for the purpose of "Realization of a Sustainable and Environmentally Friendly Society" as established in its environmental policy.

*1 The OECD Biodiversity 30 by 30 Alliance was established in April 2022 by 17 industry, private sector and government entities including the Ministry of the Environment, as a "Coalition of the Willing" to effectively promote the various policies incorporated in a 30 by 30 Roadmap of necessary activities that include the certification of areas other than nature preserves that contribute to the preservation of biodiversity (OECD : Other Effective area-based Conservation Measures). As of April 8, 116 companies, local governments, NPOs and other entities had joined the Alliance.
